

Influenza Surveillance Report

February 10, 2010

Outpatient Influenza-Like Illness (ILI) Surveillance

- For the week ending 2/6/10, visits to doctors for influenza-like illness (ILI) in New Mexico increased from 3.3% to 4.5% (Figure 1).
- The Northeast region experienced a decrease in the percentage of outpatient visits for ILI while all other regions experienced increases (Figure 2). The percentages of outpatient visits for ILI in New Mexico regions were: 0.4% in Northeast, 9.9% in Northwest, 4.1% in Central, 1.5% in Southwest and 10.7% in Southeast.

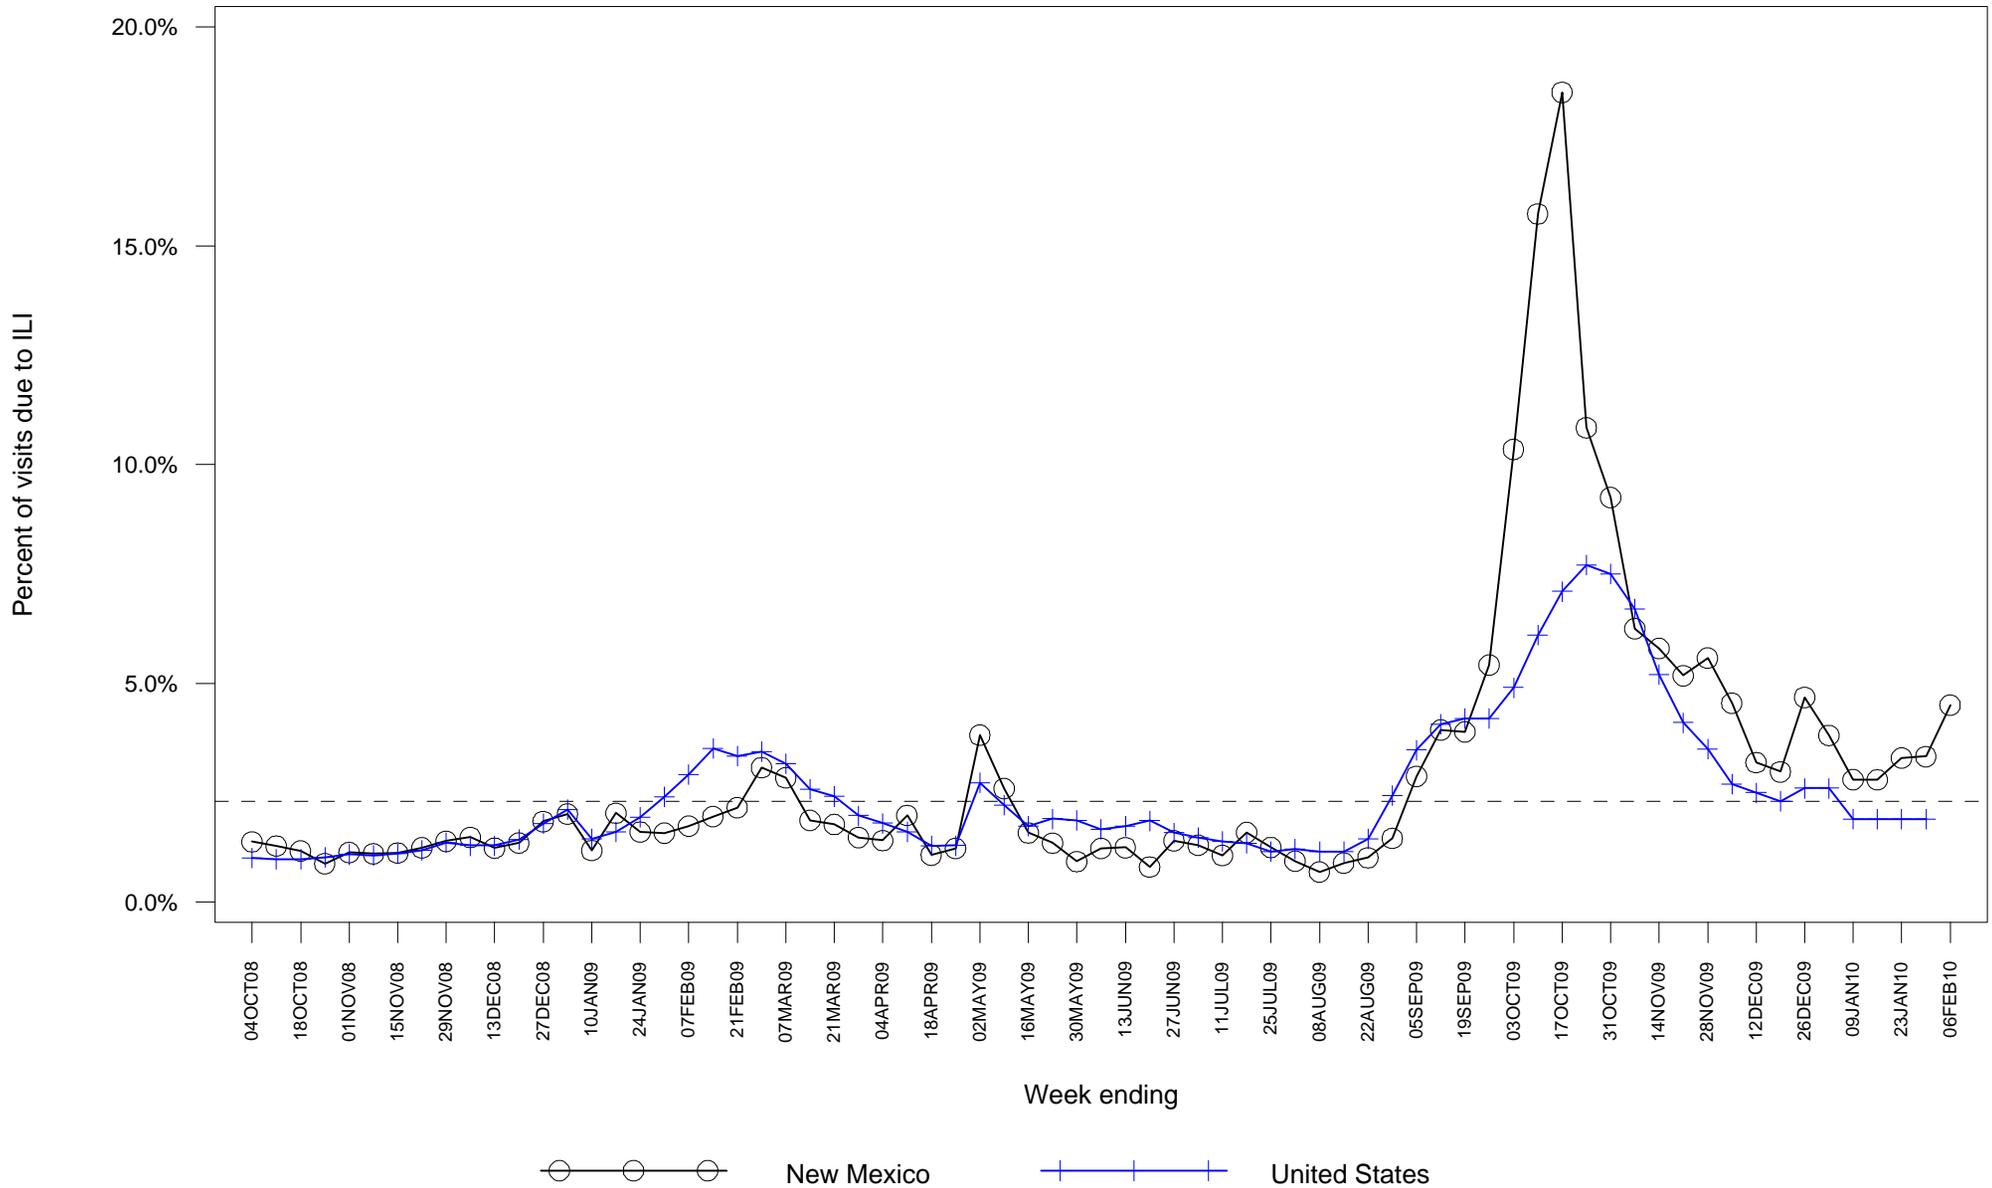

Laboratory-confirmed Influenza Hospitalization Surveillance

- Starting 10/12/09 the case definition for laboratory-confirmed influenza hospitalizations was expanded to include patients with positive rapid influenza and influenza fluorescent antibody tests. Previously the case definition only considered positive RT-PCR and viral culture results as confirmatory. This change was made to more accurately represent the burden of influenza-related hospitalizations in New Mexico.
- As of 2/10/10, there have been 1015 hospitalizations related to laboratory-confirmed influenza infection in New Mexico, an increase of 1 from last week. Figure 3 shows number of hospitalizations by week of admission. Table 1 summarizes hospitalizations by county of residence.

Laboratory-confirmed Influenza Death Surveillance

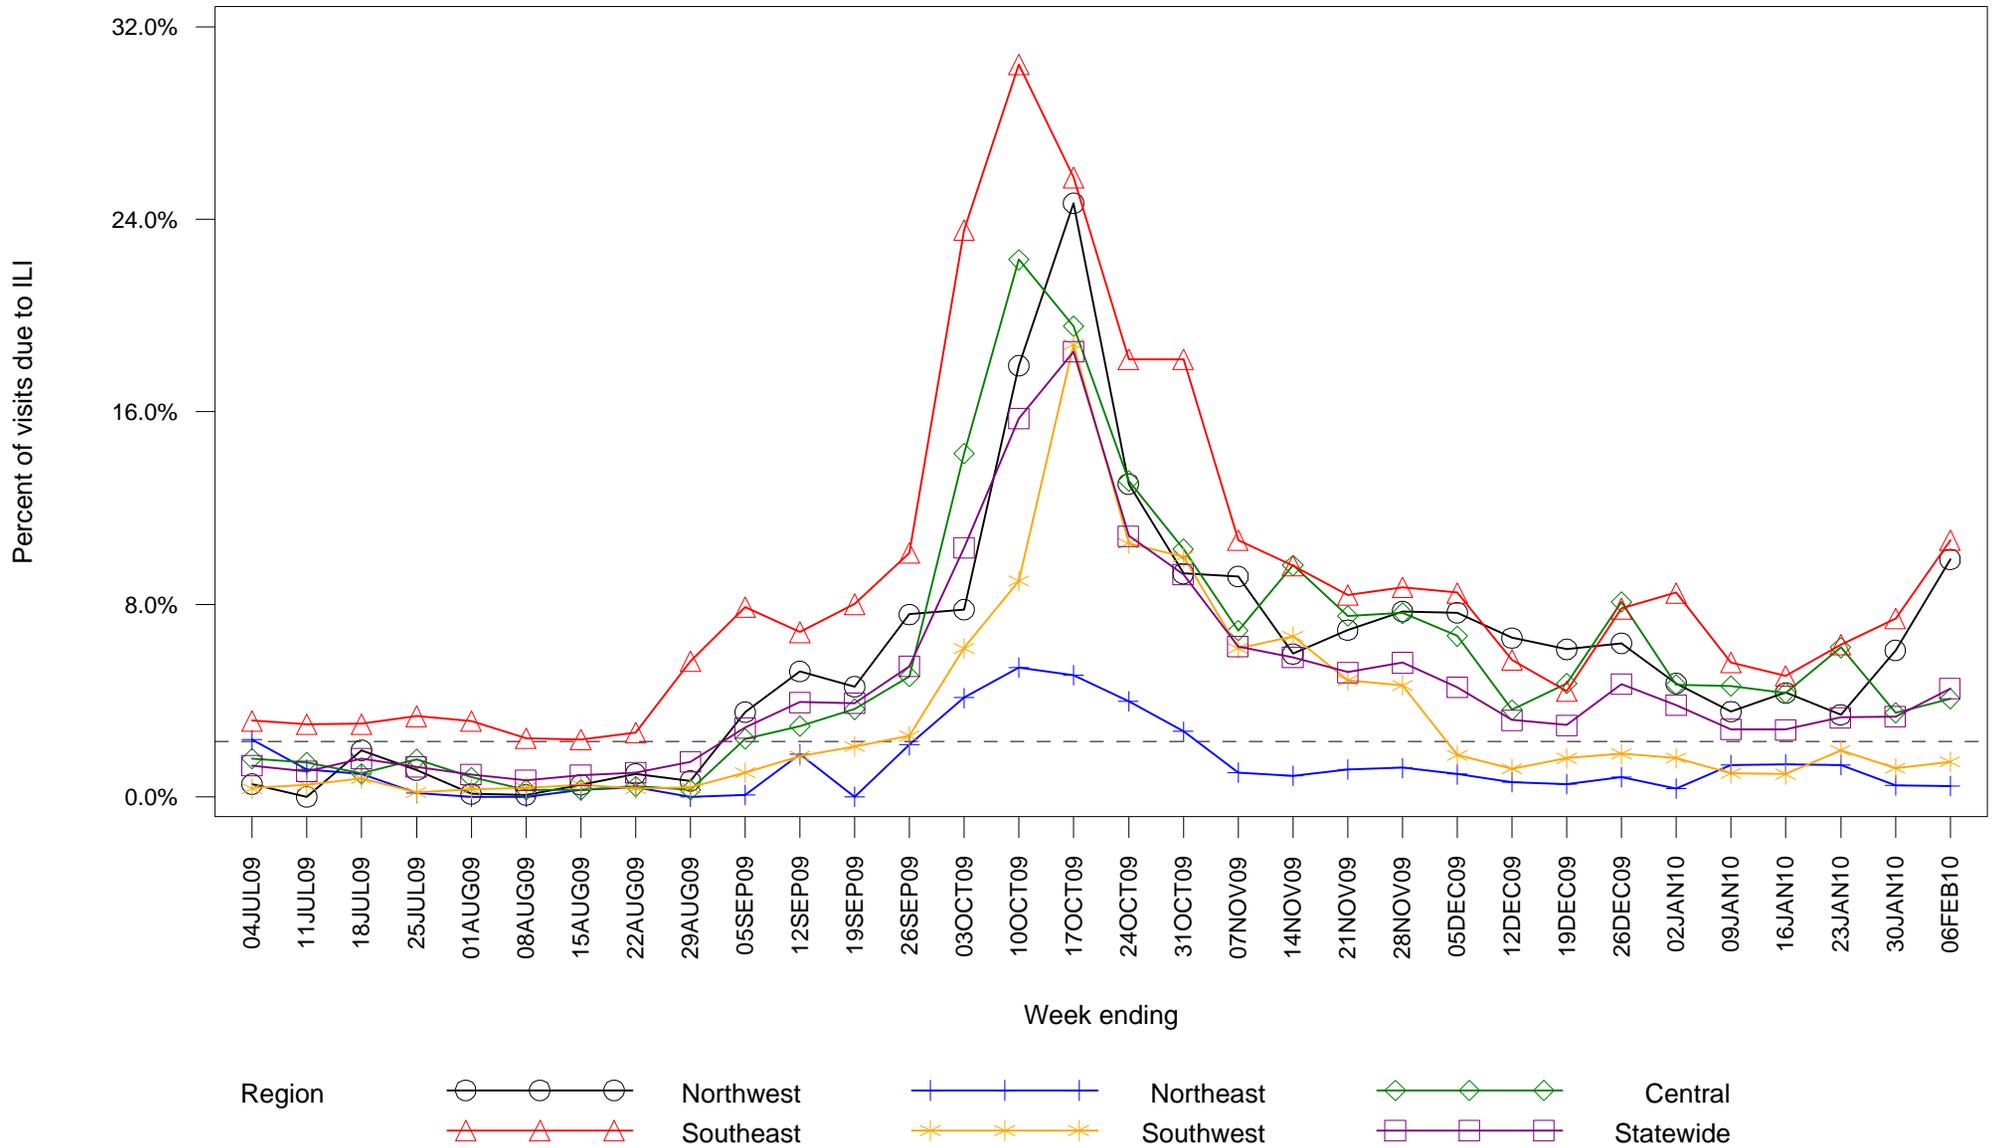

- As of 2/10/10, there have been 53 deaths related to laboratory-confirmed influenza infection in New Mexico. No new deaths were reported this week. Table 2 summarizes deaths by county of residence.

Figure 1: Percent of sentinel provider outpatient visits due to influenza-like illness (ILI) New Mexico and United States

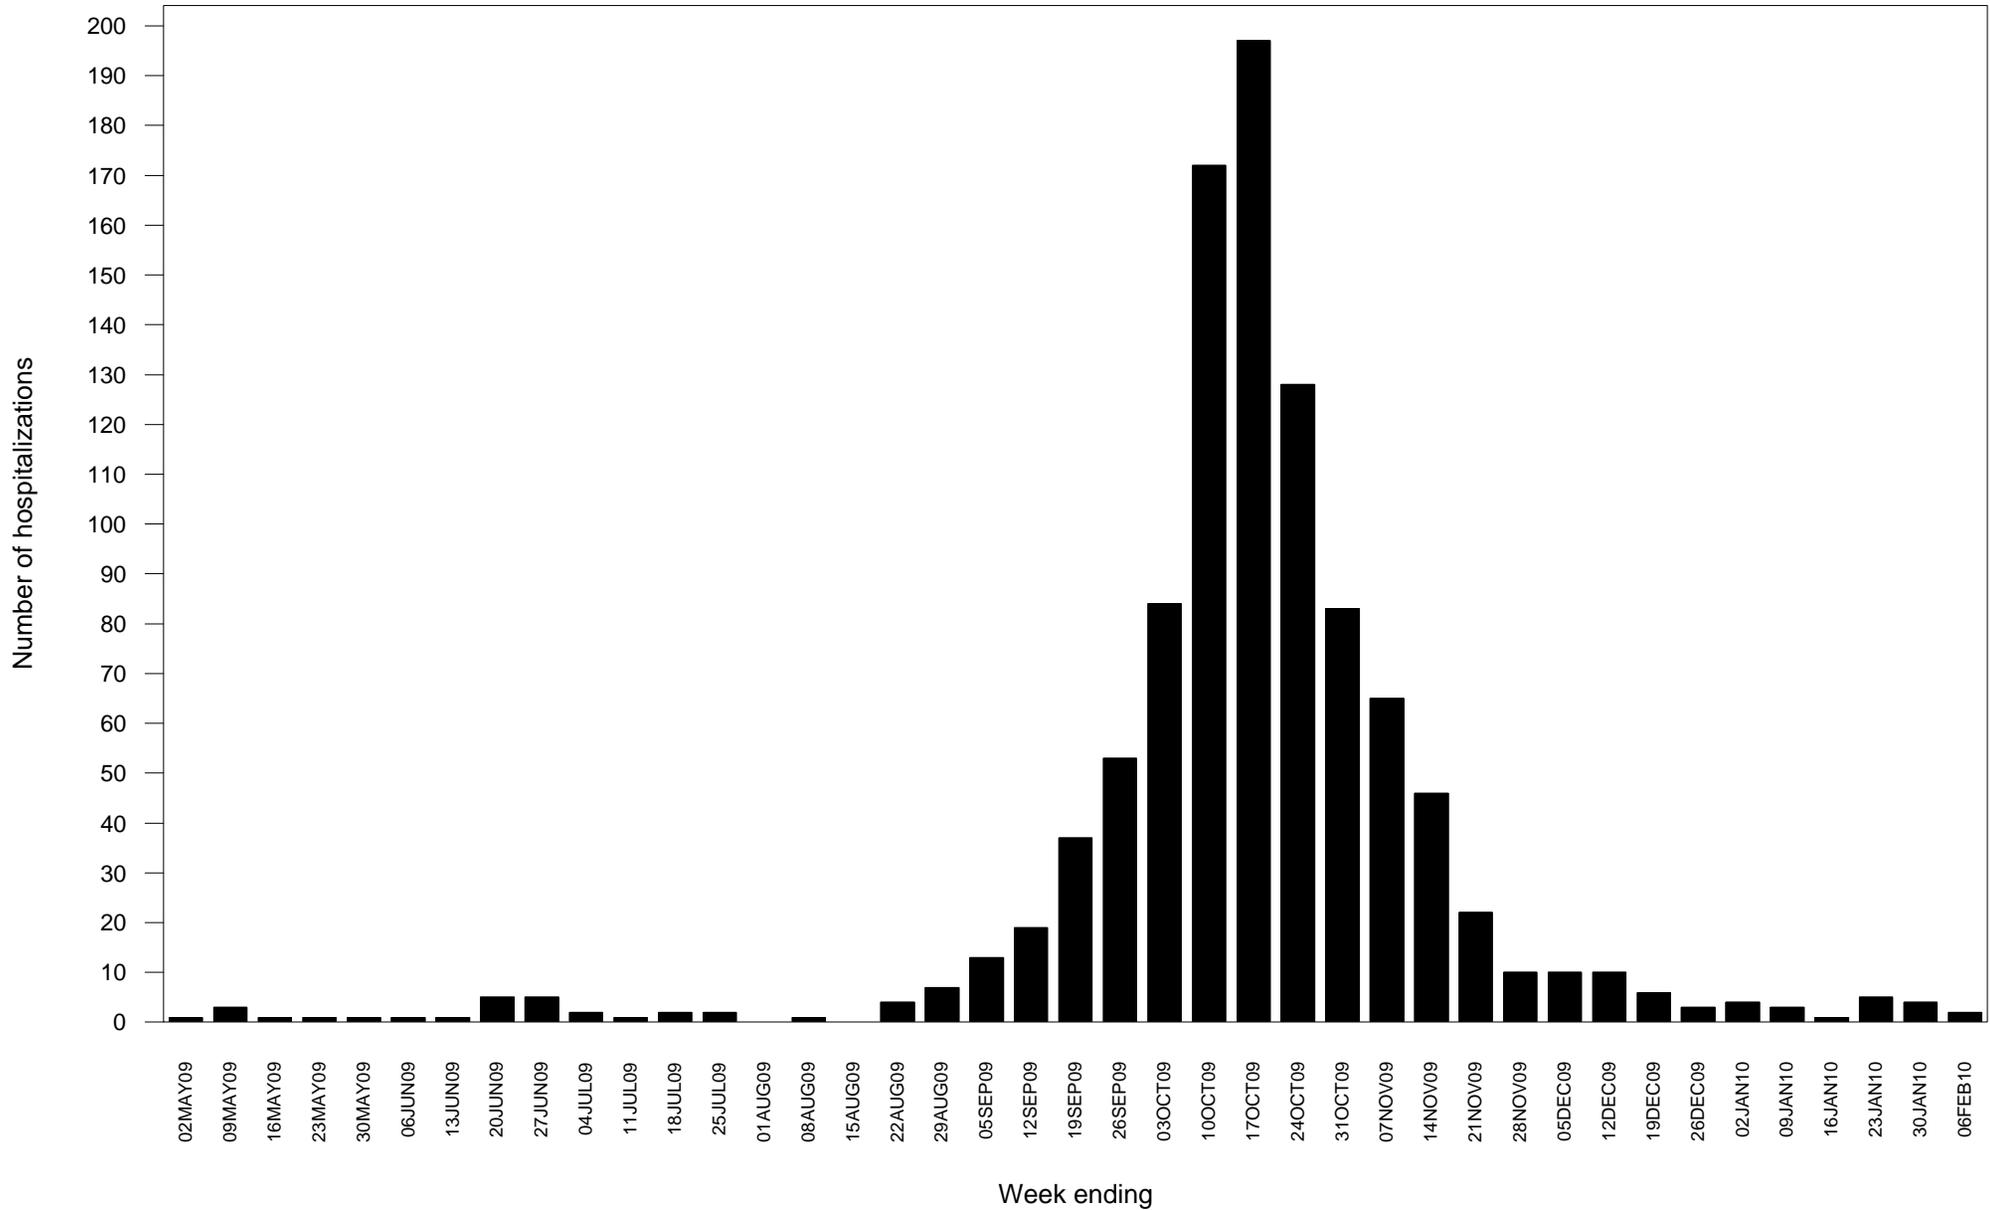

Dashed line indicates national baseline value of 2.3%. Reporting of US data is delayed a week.

Figure 2: Percent of sentinel provider outpatient visits due to influenza-like illness (ILI) New Mexico

Dashed line indicates national baseline value of 2.3%. The Southeast region consistently reports ILI visit percentages that are higher than other regions so differences between regions should be interpreted with caution.

**Figure 3: Laboratory-confirmed influenza hospitalizations by admission date
New Mexico**

Report date substituted for admission date for 2 hospitalizations for which admission date has not yet been determined.

**Table 1: Cumulative laboratory-confirmed influenza hospitalizations by county of residence
New Mexico**

County	Number
Bernalillo County	252
Catron County	3
Chaves County	18
Cibola County	16
